POSITION

INTEROPERABILITY TESTER

Location: McLean, Virginia

Description

Knighthfork LLC has an immediate need for a talented Interoperability Tester with development and coding skills. This position will work with project teams and third parties to create performance test strategies and establish test environments, including appropriate test users and test data. The successful candidate will design, develop and execute performance tests supporting new development projects and enhancements to existing projects. Performance testing may include a variety of tests, which are analyzed for load, latency, throughput and configuration. Analysis focuses on threading issues, connection pool drivers and configuration, error log analysis, memory, and interoperability of products and operating systems.

Requirements:

- 4-5 years experience with load testing software, especially Load Runner scripting
- Experience working with Federal government required
- 6-8 years general programming skills
- Significant hands-on testing and development experience to work and solve problems independently.
- Strong interpersonal and communication skills (both written and verbal) with technical and business stakeholders to understand their requirements and to communicate performance testing limitations and potentials.
- The ability to work cooperatively and effectively with cross-functional and remote teams.
- This candidate should have system level knowledge. Knowledge of a System Administrator when comes to hardware, networks, applications, databases, and telecommunications
- Knowledge of the European Telecommunications Standards Institute (ETSI) standards for Interoperability testing
- Educational Requirements:
 - B.S. in computer science or related field or comparable experience
